## PRODUCT INTRODUCTION

The standard G5 TKG series vertical inline pump and TKW series horizontal inline pump. It's an energy-efficient product, select and refer to the excellent hydraulic model domestic, designed based on the code of ISO28528 and JB/T53058. Reasonable structure, beautiful appearance, stable performance, small vibration, low noise, and long life.

# Catalog TKW/TKG

fifth-generation standard type pipe centrifugal pump

## FUNCTION

The pumps are suitable for city water supply and drainage, high-rise building water booster, garden, fire fighting, hospitals, schools, metallurgy, chemical industry, restaurant, hotel and petroleum, paper making, pharmacy and air-condition for transporting the circulation hot and cold water.

## WORKING CONDITION

### 1.Speed

2960r/min, 1480r/min, or 980r/min, 740r/min, frequency conversion as client's requirement.

### 2.Flow

1.6~1400 (3600) m<sup>3</sup>/h

### 3.Head

5~150m

### 4.Liquid Temperature

-10~80 °C .If temperature>80~180 °C , can add cooling system. Please note that temperature >180°C in the order, we can design the high temperature model pump.

### 5.Ambient Temperature

<40°C; Relative Humidity: <95%

### 6.article content in the liquid

Particle content in the liquid not more than 0.1%, size <0.2mm. If out of this range, please indicate in the order, we will use the abrasion resistant mechanical seal.

### 7.Max. Operating Pressure

Pump caliber ≤ 200mm, the pressure is 1.6Mpa;  
Pump caliber ≥ 250mm, the pressure is 1.0Mpa.

### 8.Inlet/Outlet Flange

PN16-GB/T17241.6 standard.

## CHARACTERISTIC

- TKG Pump, vertical structure, inlet and outlet of the same diameter and located in the same center of the horizontal line, beautiful appearance, small footprint, low investment, installation and maintenance is extremely convenient.
- TKW Pump horizontal structure, inlet and outlet of the same caliber, compact appearance, small footprint, low investment, installation and maintenance is extremely convenient.
- Motor and Pump shares one shaft, concentricity good, small vibration, low noise, operate steadily.
- Shaft seal is mechanical seal. As client's condition, the rotor ring and stator ring can be hard ally, ceramic, tungsten carbide, silicon carbide, graphite and etc.
- As the client's requirement, pumps can be series connection for pressure boosting or parallel connection for increasing flow.
- TKG pump can be installed vertical or horizontal as the pipe layout.
- Perfect design, It can ensure no leakage, long-life operation, save the operation management costs 50%~70%.

## ADVANTAGE

- ① Motor and Pump shares one shaft, concentricity good, small vibration, low noise, operate steadily.
- ② TKG Pump, vertical structure, inlet and outlet of the same diameter and located in the same center of the horizontal line, flow unimpeded, small lose, installation is very convenient.
- ③ TKW Pump horizontal structure, inlet and outlet of the same caliber, flow unimpeded, small lose, installation is very convenient.
- ④ Select the different castings and seals, pump can be delivered clear water, warm water, hot water, and other different liquids.
- ⑤ Select the Y2 and YX3 series energy-efficient motor, equipped with domestic, high-quality bearings, starting torque, high efficiency, small vibration, low noise, reliable operation and long service life.
- ⑥ Select the reasonable mechanical seal materials, ensure that pump can be operated for long-term without leakage. It can save the operation and management cost more than 50%.
- ⑦ Select imported mechanical seal, bearing, more reliable products.

## MODEL SPECIFICATION

## STRUCTURE

## STRUCTURE DESCRIPTION

TKG/TKW 100 / 160 - 15 / 2

Motor Pole (2,4,6)  
Motor Power (kW)  
Impeller Nominal Diameter (mm)  
Pump Inlet/Outlet Diameter (mm)  
Standard Vertical Pump/  
Standard Horizontal Pump

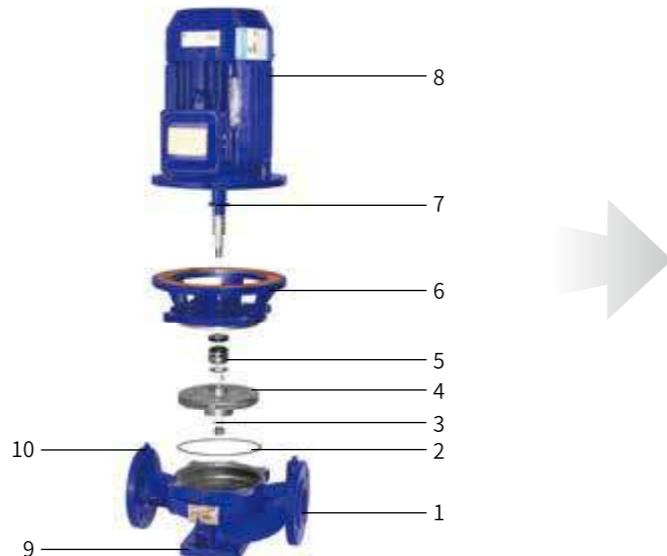

TKG/TKW pump equipped with EX motor,  
the model will be TKBG/TKBW

TKG/TKW pump's material is stainless steel,  
the model will be TKHG/TKHW

TKG/TKW pump delivered the hot water,  
the model will be TKRG/TKRW

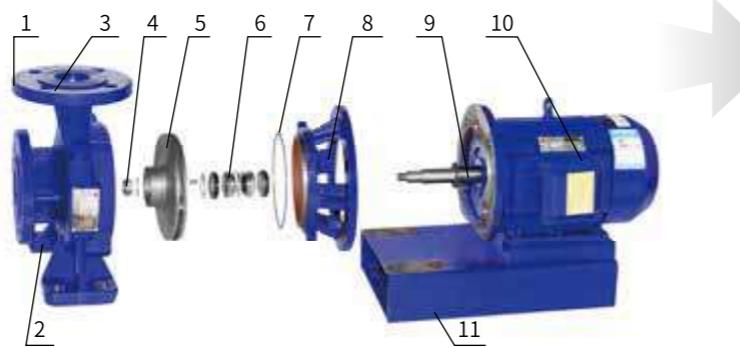

TKG/TKW pump's material is stainless steel,  
equipped with EX motor, the model will be TKHGB/TKHWB

### TKG VERTICAL PUMP

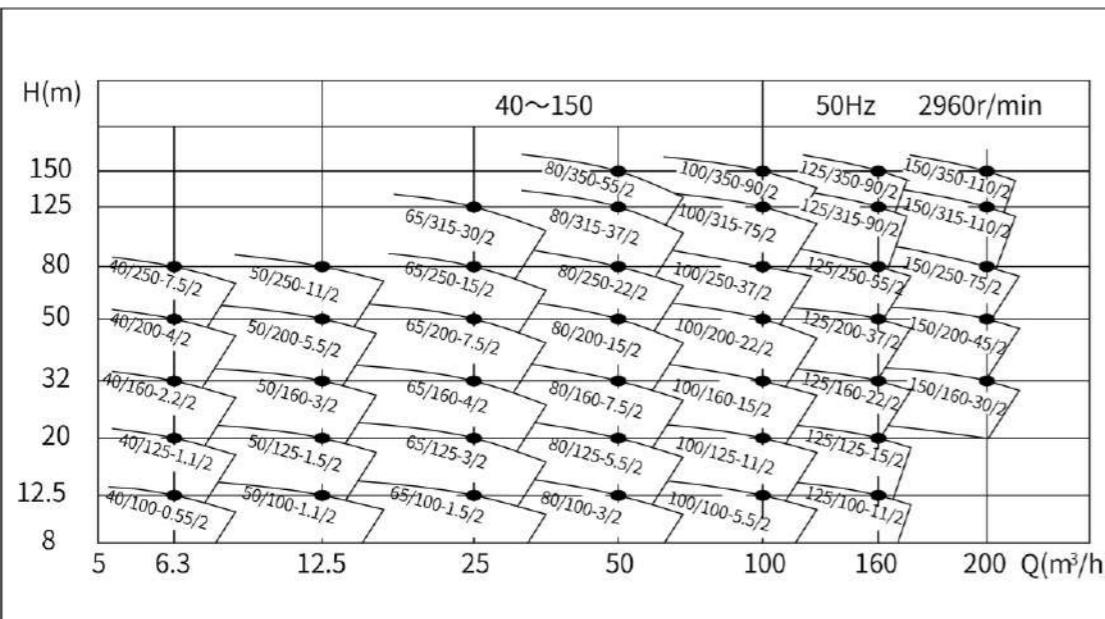

- ① Pump Body ---- Using the modern optimal hydraulic model design
- ② Seal Ring ---- high strength rubber parts
- ③ Impeller Nut ----High-quality carbon steel, corrosion-resistant stainless steel
- ④ Impeller ----Select the modern excellent hydraulic model
- ⑤ Mechanical Seal ----Rotor (stator) ring is made of Graphite, Hard Alloy
- ⑥ Pump Cover ----High-quality carbon steel, stainless steel, casting
- ⑦ Seal Circle ----High strength Rubber
- ⑧ Moto ----Y2 or YX3 series energy-efficient V1 motor
- ⑨ Drain Plug ----Empty the pump case once stopped
- ⑩ Air-out Plug ----Exclude the air in the casing

### TKW HORIZONTAL PUMP

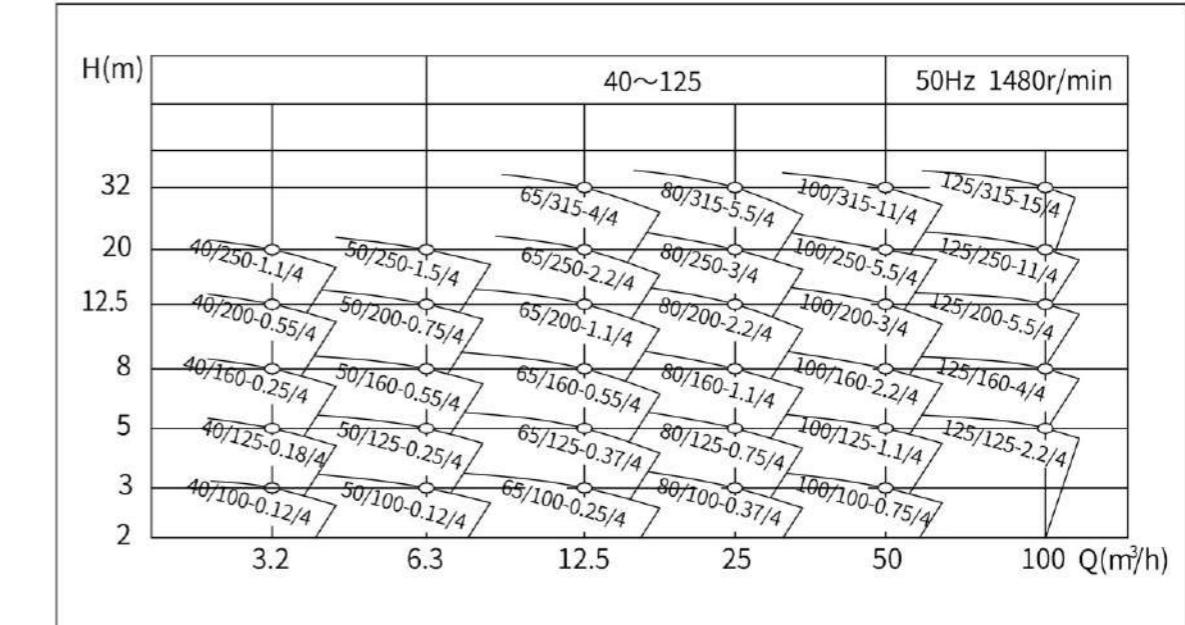

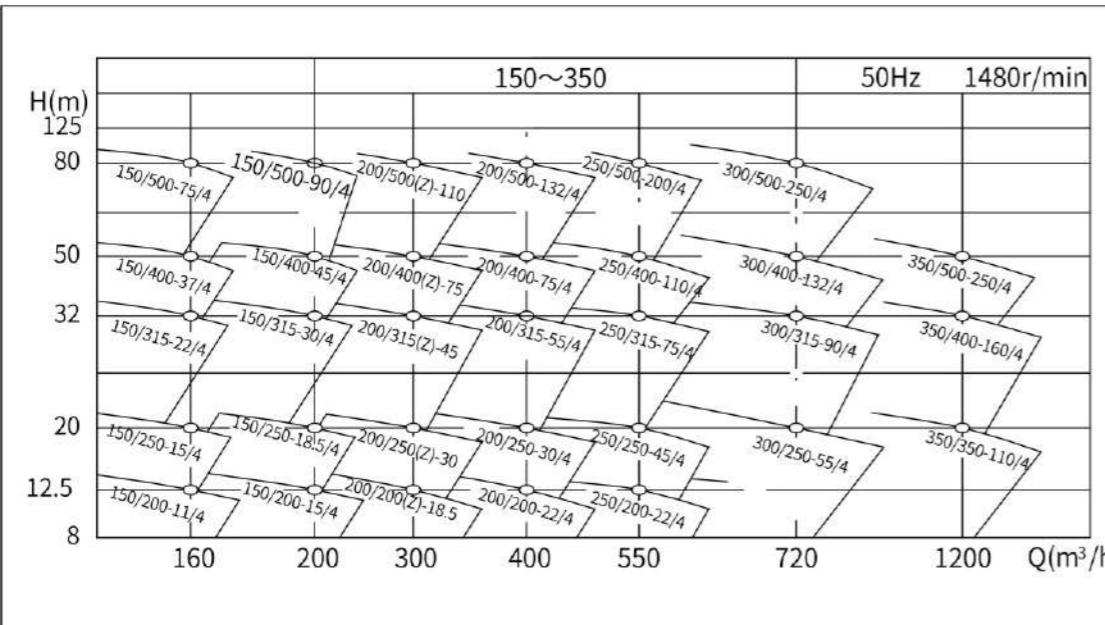

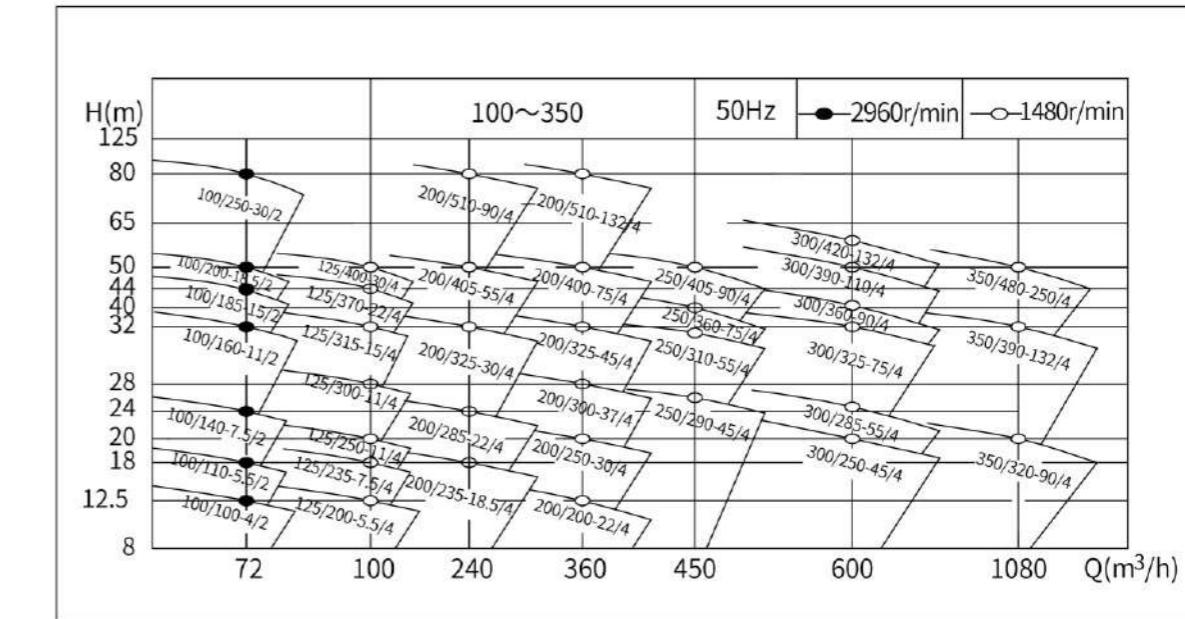

- ① Pump Body ---- Using the modern optimal hydraulic model design
- ② Seal Ring ---- high strength rubber parts
- ③ Impeller Nut ----High-quality carbon steel, corrosion-resistant stainless steel
- ④ Impeller ----Select the modern excellent hydraulic model
- ⑤ Mechanical Seal ----Rotor (stator) ring is made of Graphite, Hard Alloy
- ⑥ Pump Cover ----High-quality carbon steel, stainless steel, casting
- ⑦ Seal Circle ----High strength Rubber
- ⑧ Moto ----Y2 or YX3 series energy-efficient V1 motor
- ⑨ Drain Plug ----Empty the pump case once stopped
- ⑩ Air-out Plug ----Exclude the air in the casing
- ⑪ Air-out Plug ----Exclude the air in the casing----A fixed part of the pump to ensure the stability of the pump installation.

## TKG VERTICAL MAP

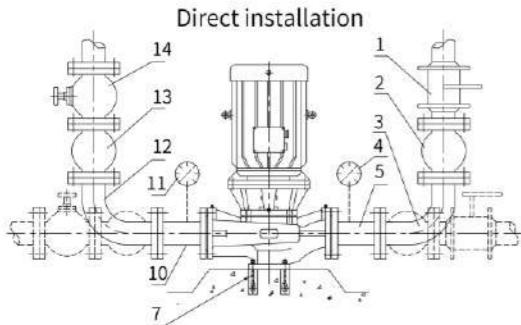

## TKW HORIZONTAL MAP

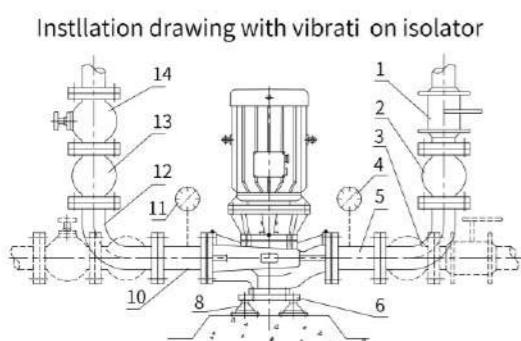

## TKG VERTICAL INSTALLATION

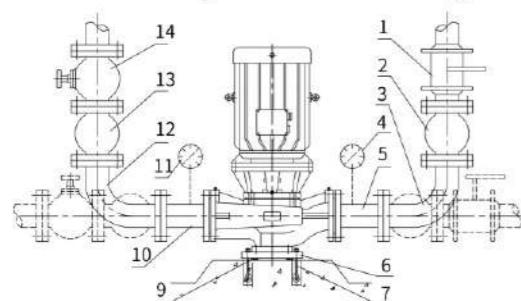

A few general installation modes

Direct installation

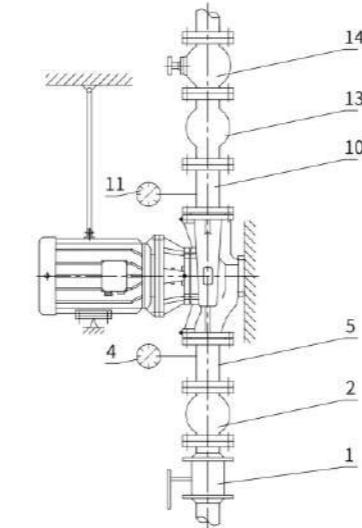

Installation drawing with vibration isolating pad

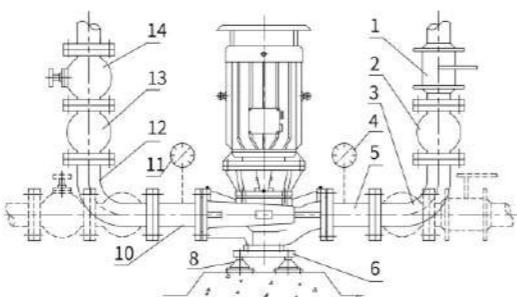

- |                           |                           |                            |
|---------------------------|---------------------------|----------------------------|
| 1. Inlet valve            | 2. Inlet flexible joint   | 3. Inlet elbow             |
| 4. Inlet pressure gauge   | 5. Inlet straight pipe    | 6. connection board        |
| 7. Ground bolt            | 8. Vibration isolator     | 9. Vibration isolating pad |
| 10. Outlet straight pipe  | 11. Outlet pressure gauge | 12. Outlet elbow           |
| 13. Outlet flexible joint | 14. Outlet control valve  |                            |

Cantilever horizontal installation

Use out doors: adopt IP54 outdoor type motor

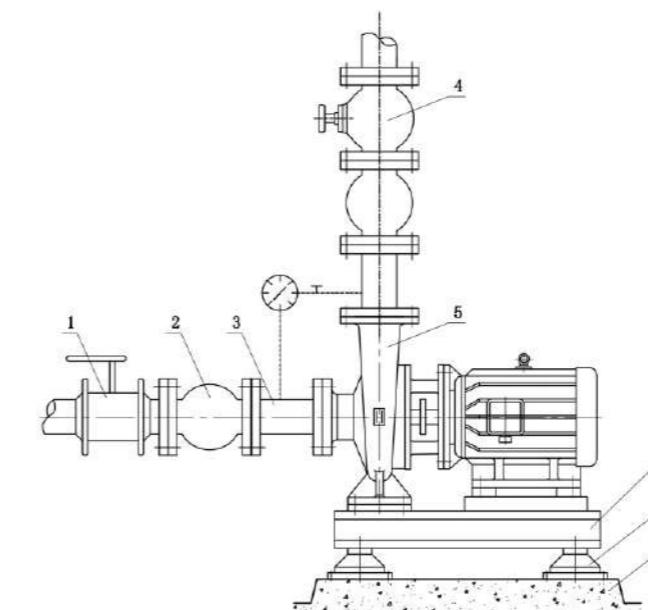

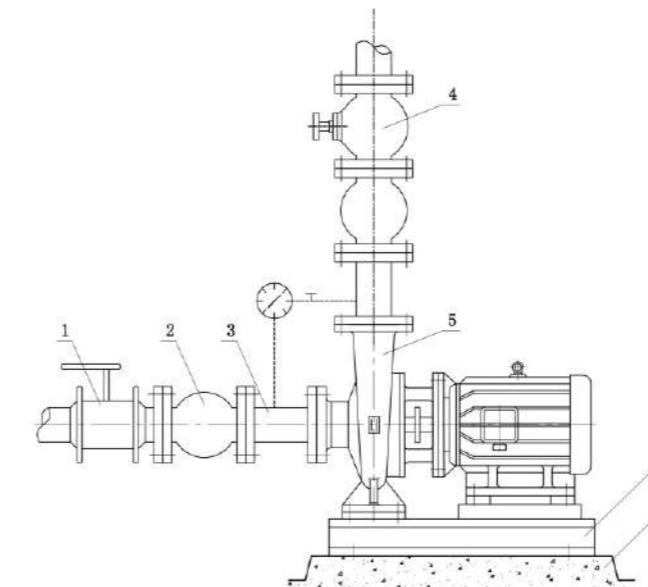

NOTE:

1. Installed with vibration isolator must with connection board.
2. We suggest not to employ cantilever horizontal just as well.
3. Include 1,2,3 three installation modes for outdoor usage.

## TKW HORIZONTAL INSTALLATION

The two installation method of common

- 1. Inlet valve
- 2. Inlet flexible joint
- 3. inlet pipe
- 4. Outlet control valve
- 5. pump body
- 6. foot disc
- 7. Vibration isolator
- 8. cement foundation

## PUMP INSTRUCTIONS

### INSTALLATION

- Should be checked before installation: no blockage within the pump flow path, check the connections between pump and pipes, tighten all the bolts and make sure no looseness;
- Should install the control valve, pressure gauge on the pipes in inlet and outlet, equipped the flex joints on the flange connection. Can not directly added the weight of pipeline on the pump, to avoid the distortion, vibration, and noise;
- The selected pressure gauge should be 1.25~1.5 times of the pump's working condition (if no pressure at the inlet, the pressure gauge is not needed at the inlet.)
- Installation method (see No. Twelve)
- After installation, rotate the pump shaft, It should not be frictional. Everything is well, then prepare to connect the electric wire.

### ADJUST, START, STOP

#### PREPARATION BEFORE ADJUSTING:

- 1. Ensure the wire connected, and tighten the connected ports to avoid lack of phase or short circuit;
- 2. Starting motor and confirm the motor rotation then stopped. From the top of motor, the correct rotation is clockwise.
- 3. Open exhaust valve, close outlet valve.
- 4. Open inlet valve, fill the water full of pump casing till water overflow from exhaust valve, then turn off the exhaust valve.
- 5. Check every parts (includes pipe, pump), to ensure no leakage.
- 6. To delivering hot water, pump needs to be preheated. The preheated speed is increase 50°C per hour and ensure every part warm evenly;

#### START:

- 1. Start motor till the speed turn to normal, then open the outlet valve slowly;
- 2. Observe the outlet pressure gauge, control the outlet pressure under the pump rated flow;
- 3. Normally adjust the outlet pressure as the three flow points on the usage manual, and test the current over the motor rated current or not. If current over, stop motor immediately;
- 4. Pump outlet valve can't opened with full size. When delivering huge flow, then can't work for long time.
- 5. When pump operating, regularly checking: pump's working temperature, motor's working current, to make sure everything is well. Maintain input and output unblocked of the cooling tank inside of hot water pump.

#### STOP:

- 1. Hot water pump should be lower the temperature, the decrease speed less than 10°C per minute till temperature under 80°C , then pump can be stopped.
- 2. Shut off the outlet valve, turn off motor;
- 3. Shut off the inlet valve; if not use for long time, the liquid pump inside should be drain off.

## MAINTENANCE AND REPAIR

### MAINTENANCE:

- 1. Inlet pipe must be filled with liquid, prohibit run for long time in the state of pump cavitation, can not be working without water even more!
- 2. Prohibit pump reverse rotating for long time;
- 3. Do the daily work of the pump check, to appear abnormal noise, vibration intensity is large, current overload, temperature rise is not normal should immediately stop it and check it again.

### REPAIR:

- 1. Regularly check the pump's bearing lubrication. Normally running after 500 hours, plus lubricating oil. Running after 5000 hours, pump stopped and separated to wash and lubricate.
- 2. If pump long time no use, clean and dry the components, apply oil and seal it in a storehouse at a normal temperature;
- 3. To assemble the pump, it should follow the reverse order of disassembling without any missing of components, and wearing parts, such like bearing, mechanical seal and end face gasket ring, should be replaced during heavy repair.
- 4. To replace the motor's bearing, the specific disassembling tools should be used. First clean the bearing to be replaced and apply oil on it with a volume not larger than two thirds of the bearing oil chamber;
- 5. High-quality greasing should be adopted for oiling of the bearing chamber. It's not allowed to have any impurities in the grease or even use deteriorated grease.

### ■ 6. Detailed list of wearing parts

## FAULT REASONS AND PROCESSING METHODS

Fault	Possible Reasons	Processing Methods
1. No water flow out	<ul style="list-style-type: none"> <li>a) The inlet and outlet valves are not opened; the pipeline or impeller channel blocked.</li> <li>b) The motor running direction is wrong, lack of phase, the speed is very slow.</li> <li>c) The suction pipe leaks.</li> <li>d) The liquid is not full of pump, air inside pump chamber not drained off</li> <li>e) The inlet is short of water supply, the suction lift is too high, the bottom valve leaks.</li> <li>f) The pump resistance is excessive and pump type is not right.</li> </ul>	<ul style="list-style-type: none"> <li>a) Check, and remove the clogging</li> <li>b) Adjust the motor's turning direction, and tighten the connected terminals.</li> <li>c) Tighten all sealing surfaces and exhaust air.</li> <li>d) Open outlet exhaust valve and refill water and exhaust.</li> <li>e) Stop pump and check, adjust the water supply and replace the bottom valve.</li> <li>f) Reduce the pipeline's turns and select a new pump.</li> </ul>
2. The flow is deficient	<ul style="list-style-type: none"> <li>a) Check the reasons as the step 1 first.</li> <li>b) The pipeline or impeller flow channel blocked, scale deposition and inadequate valve opening.</li> <li>c) The voltage is too low.</li> <li>d) The impeller is abraded</li> </ul>	<ul style="list-style-type: none"> <li>a) Troubleshoot with the method as the step 1 first.</li> <li>b) Remove the blockage and readjust the valve's opening.</li> <li>c) Stabilize the voltage</li> <li>d) Replace the impeller.</li> </ul>

Fault	Possible Reasons	Processing Methods
3. Power is excessive	<ul style="list-style-type: none"> <li>a) Its working flow is beyond the rating.</li> <li>b) The suction lift is too high.</li> <li>c) The pump's bearing abraded.</li> </ul>	<ul style="list-style-type: none"> <li>a) Adjust the flow, and turn down the outlet valve.</li> <li>b) Reduce the suction lift.</li> <li>c) Replace the bearing.</li> </ul>
4. Noise and vibration	<ul style="list-style-type: none"> <li>a) The pipeline support is not stable.</li> <li>b) The liquid is mixed with air.</li> <li>c) Cavitation</li> <li>d) The bearing is damaged.</li> <li>e) The motor runs in an overload and heating state.</li> </ul>	<ul style="list-style-type: none"> <li>a) Stabilize the pipeline</li> <li>b) Increase the suction pressure, and exhaust the air.</li> <li>c) Reduce the vacuum degree</li> <li>d) Replace the bearing.</li> <li>e) Adjust as the step 5.</li> </ul>
5. The motor heat	<ul style="list-style-type: none"> <li>a) The flow is excessive with overload operation</li> <li>b) Scuffing</li> <li>c) The motor's bearing is damaged</li> <li>d) Under voltage</li> </ul>	<ul style="list-style-type: none"> <li>a) Turn down the outlet valve</li> <li>b) Check and process it</li> <li>c) Replace the bearing</li> <li>d) Stabilize the voltage</li> </ul>
6. The pump leaks	<ul style="list-style-type: none"> <li>a) The mechanical seal is abraded.</li> <li>b) The pump body has sand holes or cracks.</li> <li>c) The seal surface is uneven</li> <li>d) The mounting bolts are loose</li> </ul>	<ul style="list-style-type: none"> <li>a) Replace it.</li> <li>b) Weld it or replace it.</li> <li>c) Repair</li> <li>d) Fastening the bolt.</li> </ul>
